DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-5,10,17-19 and 26-37 are rejected under 35 U.S.C. 102(e) as being anticipated by Bullock'049 et al.

The Bullock'049 et al. reference discloses a fuel supply apparatus comprising a fuel supply 132 with associated fuel stack 142 (i.e. plural fuel supplies and manifolding would be implied), a valve interface (proximate numerals 156,152), and a host device 140 with associated valve sockets (proximate numerals 158,154), wherein the fuel supply includes an implied front

Art Unit: 3751

face in which valve devices (156,152) project from with a predetermined geometric shape (i.e. including size, dimension, and corner location) that defines a datum in its entirety (i.e. especially in as much as a datum defines) and the host device includes a matching socket or matching datum that complements the shape and geometric configuration of the datum on the fuel supply.

In regard to claims 26 and 27, the datum and valve interfaces are disposed relative to each other such that either Cartesian or spherical coordinates can be used to measure or place one with respect to the other.

In regard to claim 28, in as much as standardized defines, any portion of the fuel supply front face and corresponding part on the host device could be considered to be standard.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bullock et al. in view of Prasad'427 et al.

The Bullock et al. reference discloses a fuel supply (supra), but does not disclose the front face of the fuel supply as being curved. The Prasad et al. reference discloses another fuel supply having an interface portion (30,28) with a host device that exhibits curved corner portions (proximate reference numeral 62). It would have been obvious to one of ordinary skill in the art at the time the invention was made to substitute an interface portion with associated curved

Application/Control Number: 10/773,481

Art Unit: 3751

portion on the fuel supply as, for example shown by Prasad et al. for the broadly disclosed interface portion of Bullock et al. wherein so doing would amount to the mere substitution of one interface portion for another that would work equally well in the Bullock et al. device.

Response to Arguments

Applicant's arguments with respect to claims 1-5,10,11,18-19 and 26-36 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven O. Douglas whose telephone number is (571) 272-4885. The examiner can normally be reached on Mon-Thurs 6:00-6:30.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (tall-free).
